

# THE NSSR ROAD SAFETY/SUPPORT PROGRAMME

Road Safety / Support is a mainline National Safety and Social Responsibility

MONTHLY  
BULLETIN

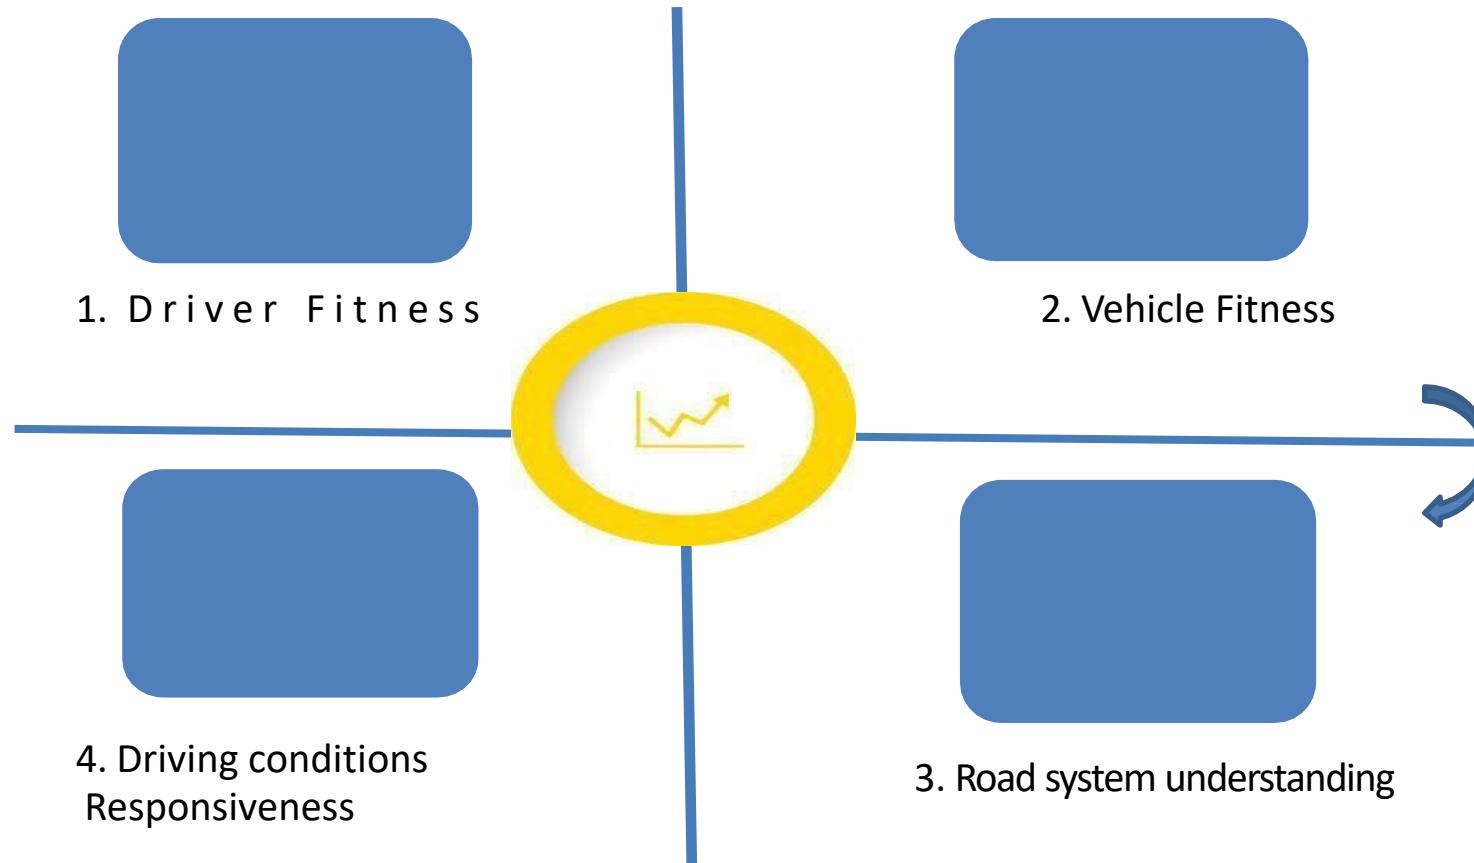

**DASHBOARDING ROAD SAFETY / SUPPORT  
BY  
VENKATRAM K S, AOEC 2026-2027**

June  
2026

# Dashboarding Road Safety/Support

- AOEC finds that safety while commuting on road, depends upon the automobile manufacturer's quality assurance, driver fitness, vehicle fitness, driving conditions dimensioning, and road system responsiveness, where driving conditions need us as commuters/road-system-infrastructure stakeholders to fine focus and design capability for improved road safety.

Driving conditions dimensioning  
JOURNEY/TRIP  
Route  
Road Surface, Distance, Drive time, and Correlation for Responsiveness, Safety and Reliability

Reciprocal Driving insights  
TMS Resilience for route designed RADIUS and CIZ

CIZ : CRITICAL INTERACTION ZONE IN A JOURNEY/TRIP

# Dashboarding Road Safety/Support

- AOEC finds that instrumentally, Dashboarding Road Safety / Support (DRSS) projects must
- define a TMS workflow for accentuating
- 1. Driver Fitness
- 2. Vehicle Fitness
- 3. Road system understanding
- 4. Alpha Assistance
- 5. 5R(s) SMART(ness) for a safer journey

# Dashboarding Road Safety/Support

- DRSS SMART(ness) for a journey/trip and virtual POINT SLOPE INTERCEPTION can make it simpler to identify the tangible correlation between driving conditions dimensioning of a route/road system/road with a DRSS Workflow to help and improve safer commuting
- This DRSS Workflow plus NSSR RS programme teamwork can
- Record-or-review,
- Relate,
- Reduce risk,
- Reciprocate response and
- Design Resilience for any journey/trip and its dimensions like the
- road surface,
- distance,
- drive time,
- commute reliably factors, where there is universal or brand specific service centre-assessable part-lifetime mitigation, condition monitoring, traceable fault tolerance/preventive and corrective action, where this DRSS Workflow development can help a NSSR participant define/use a NSSR RS index for a journey/trip/TMS radius, where the index can be simply (1), (2), (3), (4) or combinations of them

The NSSR project recommends the use of different assistants to help commuters improve their experience

# Dashboarding Road Safety/Support

- **(1) NRRS-I1:** where this workflow will need to address History of interaction & Foreseeable needs and 5R(s)
- **(2) NRRS- I2:** = this workflow will need to address Critical Interaction Zone needs and 5R(s)
- **(3) NRRS- I3:** this workflow will need to address Road/Route dynamics and 5R(s)
- **(4 NRRS- I4:** this workflow will need to address Advanced safetyneeds and 5R(s)
  - (like air quality, unregulated climate intolerance, temperature/humidity, road system or road or terrain safety, with more than an expected driving style for commuting with safety, reliability & timing and with more than programmed gear changes, or braking or drive distribution between the front and rear wheels as expected in 4WD modes)
  - The bulletin looks at the different assistants that can help a commuter's 5R(s). The editions that follow will delve into details of each of them to help a commuter/stakeholder ramp up scores in a dashboard

# Dashboarding Road Safety/Support

- The DRSS Data Analysis Channel Building for an **automobile manufacturer's quality assurance, driver fitness, vehicle fitness, driving conditions dimensioning, and road system responsiveness** for deteriorating or changing driving conditions dimensioning of the needed SMART(ness for safer commuting will need to
- **1. Improve Sensitization and Awareness for Road Safety**
- **2. Develop issue/feedback/data channelization for safer commuting**
- **3. Provide handbooks/guides/planners for such planning/ incorporation**
- **4. Promote quality for road safety and infrastructure via NSSR guided methodologies like the training programmes/monthly bulletins & quizzes/dashboarding of experience or incidences**

DRSS Lifecycle and  
NSSR RS Teamwork for  
the DRSS Workflows

- (a-1) Visual and Safety inspection
- **Details:**

# TMS-Guiding-system

- **TMS Channel Building- Inspection or Maintenance schedule (tabulation):**
- (a-2) Vehicle Parts / Systems Assessment (as per CIZ and related conditions)
- Details:

# TMS-Guiding-system

- **(a-3) Service Anywhere Anyhow Review and Safety inspection by Service Centre expert (as applicable)**
- **[Details:**

## TMS-Guiding-system

- **(b) Comfort level / Safety level specific Preventive maintenance details (as applicable)**

# TMS-Guiding-system

- **(c) Comfort level / Safety level specific Corrective maintenance details (as applicable)**

# TMS-Guiding-system

- **(d-1) Driver experience 5R(s)**

# TMS-Guiding-system

- **(d-2) Service Centre 5R(s)?**

# TMS-Guiding-system

- **(d-4) TMS Channel Building / Incidence management ck details (as applicable)**
- **Details:**

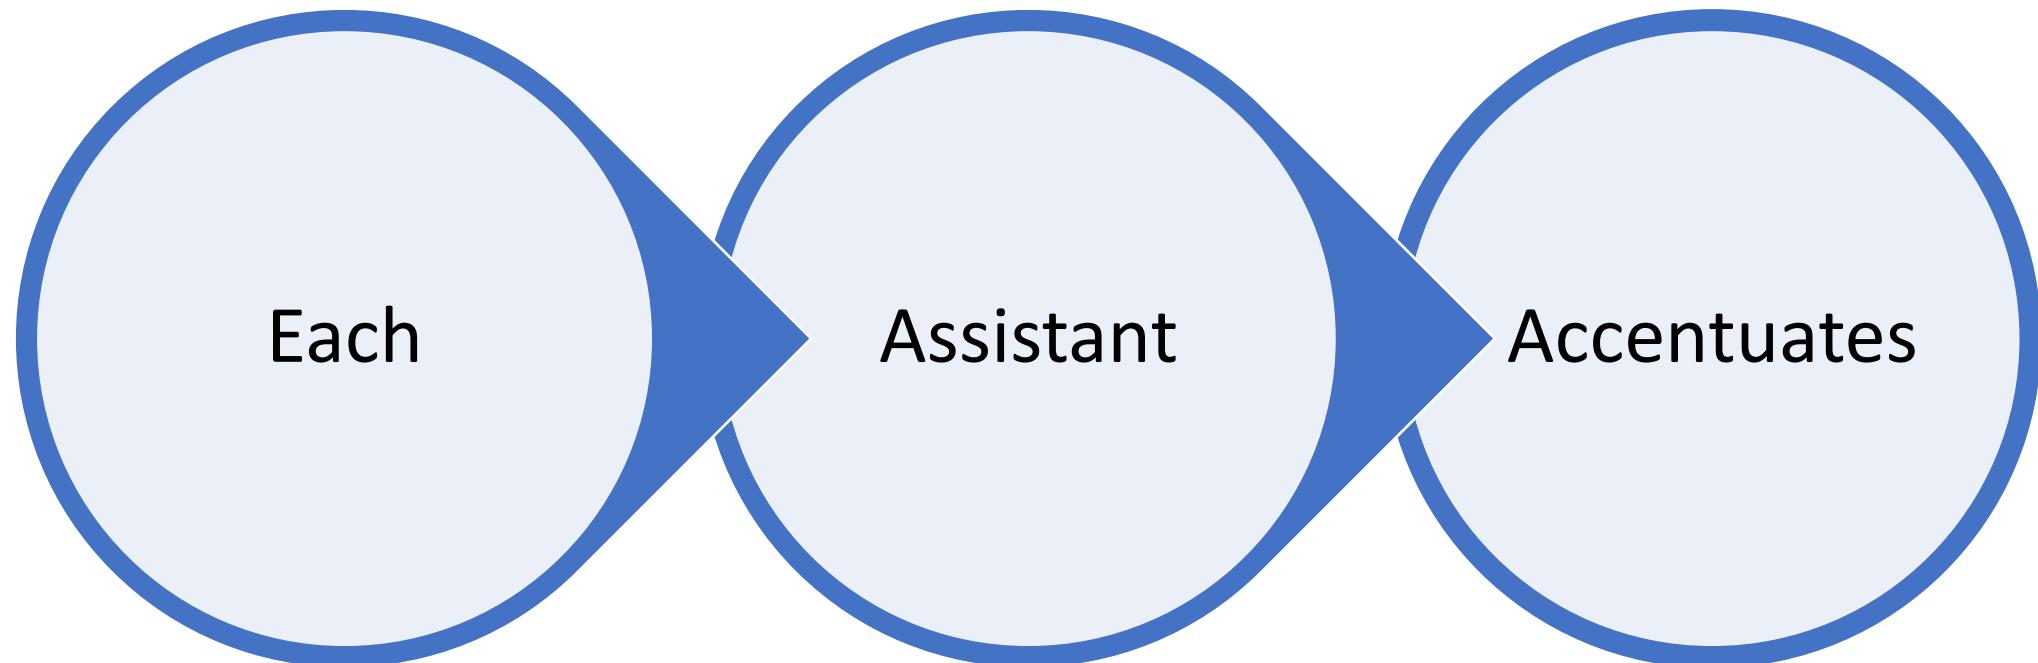

## TMS-Guiding-system

- **(e) Delay/Breakdown, Drive experience or comfort, or safety, or performance issue-mitigation details (as applicable)**
- **Details:**

# TMS-Guiding-system

- **(f) Safety advisory (as relevant to the case):**
- **(a) Dos**
- **(b) Donts**

## TMS-Guiding-system NSSR RS Video Assistants

# TMS-Guiding-system – NSSR RS VIDEO ASSISTANT

- The proposed video assistance can be based on 3 fundamental stages, that is
- 1. Process
- 2. Diagnose
- 3. Classify
- **The Process stage of the solution**
- **1. Process (being sampled)**
- The Process stage will enable a DRSS/NSSR RS master and REALTIME DRSS/NSSR RS candidate video to be played in 2 different panes to check quality or eligibility, or played and captured as (snapshot) frames, where the frames are stored in specific master and candidate folders for these frames to be later reviewed, diagnosed and classified
- The code for comparing images of a candidate video image with a master video image **has been tested** using the sift implementation available in cv2

# TMS-Guiding-system – NSSR RS VIDEO ASSISTANT

## **The Diagnose stage of the solution**

### **2. Diagnose (to be sampled)**

The Diagnose stage will use a DRSS/NSSR RS master folder and REALTIME DRSS/ NSSR RS candidate folder of master and candidate video (snapshot) frames.

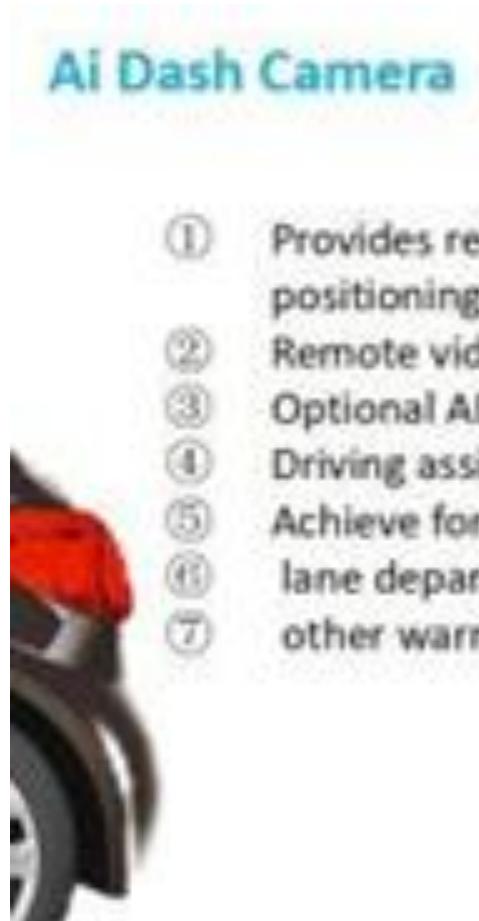

On the selecting of a master video frame, it will be used for training, diagnosis and associated comparisons.

If a candidate video frame does not comply with the conformity of the benchmarked master video frame, then the candidate frame will be copied into the C-Frames-not-ok sub folder for further deep learning/classification

If a candidate video frame does comply with the conformity of a benchmarked master video frame, then the candidate frame will be copied into the C-Frames-ok sub folder under K-Nearest Neighbour distance pretexts

- **The Classify stage of the solution**
- **3. Classify (to be sampled)**
- The candidate video and candidate video frames that are not conformant in comparison with the benchmark master video and master video frames, will be specifically used for deep learning of the issues seen or for classification that permits in-sync problem resolution.
- The feature of deep learning will evolve with the scope of the project/solution
- AOEC is also reviewing the use of an AI Powered Dashcam to help formalize the video assistance solution

# TMS-Guiding- system – AI powered VIDEO ASSISTANT

- ① Provides real-time communication positioning, data storage
- ② Remote video preview,
- ③ Optional ADAS advanced
- ④ Driving assistance system
- ⑤ Achieve forward collisionproximity
- ⑥ lane departure
- ⑦ other warnings

reviewing

# TMS-Guiding-system – AI powered VIDEO ASSISTANT

reviewing

The diagram illustrates the TMS-Guiding-system's architecture. At the top, a blue box labeled 'reviewing' contains a downward-pointing arrow. This arrow points to a central white area containing three video frames. The first frame on the left shows a night-time highway scene with a blue overlay indicating '2.5 S' and 'H: 1.40m', labeled 'Forward collision warning (FCW)'. The middle frame shows a night-time highway scene with a blue overlay indicating '0.6 S', labeled 'Lane departure warning (LDW)'. The third frame on the right shows a night-time highway scene with a blue overlay indicating 'H: 1.40m', labeled 'Headway monitoring warning (HMW)'. Below these frames, a blue box labeled 'ADAS' lists three features: 'Lane departure warning (LDW)', 'Forward collision warning (FCW)', and 'Headway monitoring warning (HMW)'. Below this box, another blue box labeled 'DMS' lists nine driver monitoring icons: Fatigue, Call, Smoke, Empty Driver, Distract, Facial Recognition, No-safety belt, Hands off the steering wheel, and NOT wearing a safety helmet. To the right of the central video area, there is a diagram showing a black rectangular device connected to a network of lines labeled '3G/4G', 'GPS/SD', and 'Wi-Fi'. Below this diagram are two smaller images: one showing the interior of a car's dashboard and steering wheel, and another showing a person's face with a white box around it, likely representing facial recognition technology.

■ ADAS

- Lane departure warning (LDW)
- Forward collision warning (FCW)
- Headway monitoring warning (HMW)

Forward collision warning (FCW)

Lane departure warning (LDW)

Headway monitoring warning (HMW)

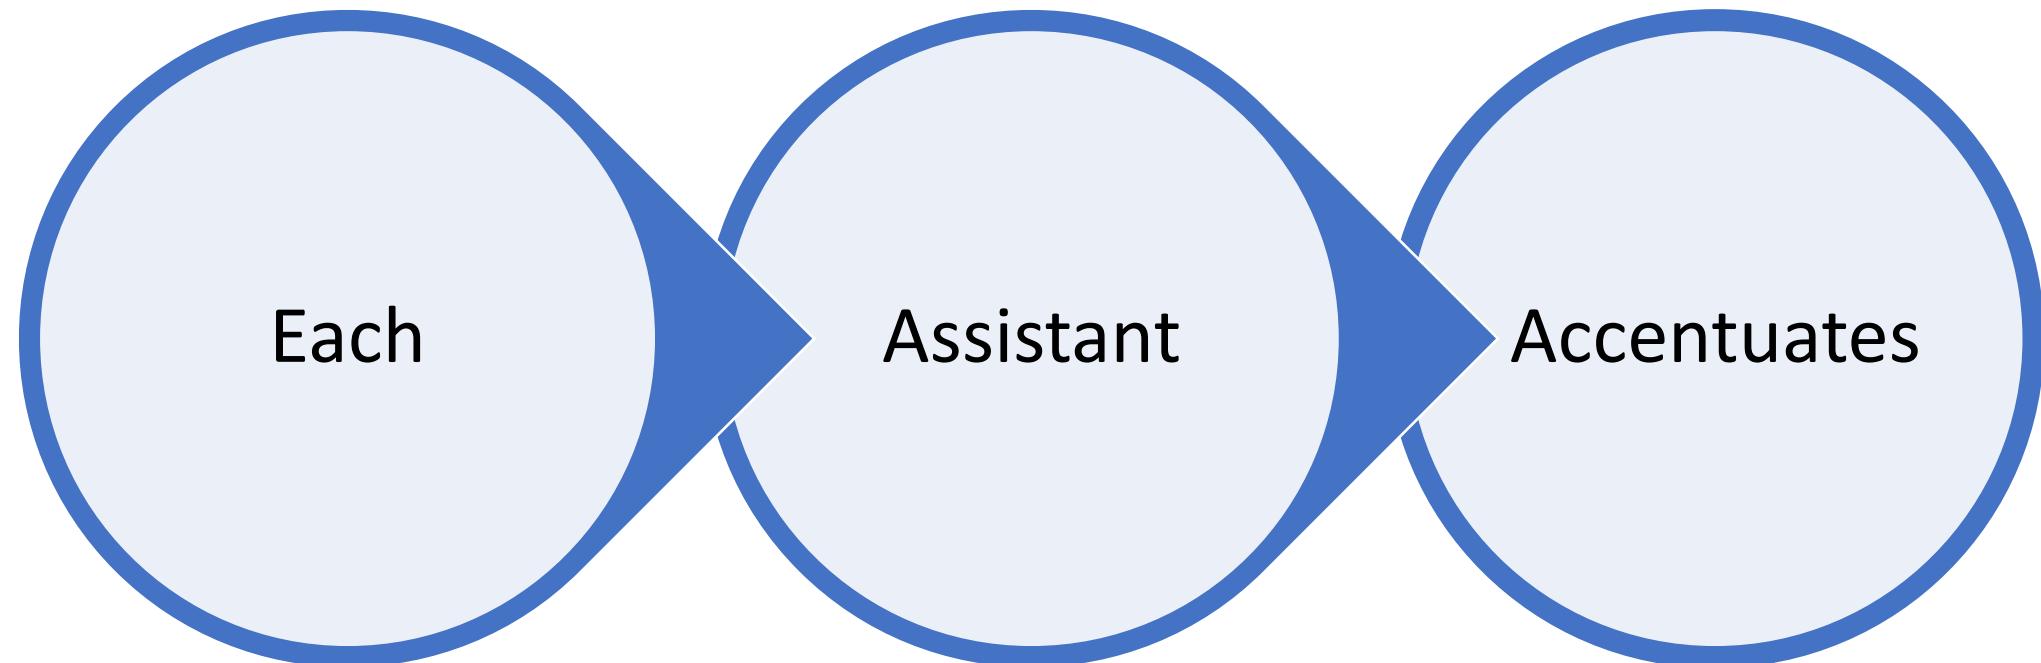

■ DMS

- Fatigue
- Call
- Smoke
- Empty Driver
- Distract
- Facial Recognition
- No-safety belt
- Hands off the steering wheel
- NOT wearing a safety helmet
